PROFESSIONAL SUMMARY

Technical Project Manager and backend engineer with nearly **4 years** in the **Laravel ecosystem**. I lead development teams at JoyBox and ship production systems hands-on: a **fleet payroll platform guarded by 330+ automated tests**, ERP accounting modules, multi-tenant applications, and a real-time tracking service in Go. A BSc in Mathematical Statistics backs the financial and reporting work. I use **AI-assisted development** to deliver production frontends (React, Three.js, Vue.js) and to automate code review.

CORE COMPETENCIES

Management

- Project Management
- Agile/Scrum
- ERP Supervision
- Team Leadership
- SDLC

Frontend

- HTML5/CSS3
- Livewire
- Alpine.js

Architecture

- Multi-Tenant Systems
- Microservices
- Real-Time Tracking

Backend

- Laravel
- Filament PHP
- Go (Golang)
- Ruby on Rails
- RESTful APIs
- Node.js / Express

Tools & Infrastructure

- MySQL
- SQLite
- Git/CI/CD
- PHPUnit
- Linux VPS / Apache
- AWS
- Postman
- SSH/FTP

AI-Guided Development

- Prompt Engineering
- AI-Guided Dev
- React / Three.js
- Vue.js / JavaScript
- n8n Automation
- MCP Tools

PROFESSIONAL EXPERIENCE

●

Technical Project Manager

JoyBox Company • Damascus, Syria

Sep 2025 — Present

- Built and operate **FleetOps**, a fleet and driver-payroll platform for a Kuwait delivery operator (Laravel 13, React 18): contracts, daily logs, tiered and zone-based driver pay, client billing, contract profitability, and bank/cash salary disbursement
- Guarded its payroll with **330+ automated tests** and a golden-master gate that recalculates every payroll sheet against frozen production data before each deploy
- Delivered the "Riad Alsalheen" TV Channel App from scratch in one month:** live streaming, media playlists, video uploads, and interactive gaming modules
- Supervise the **Zahi ERP** (inventory, invoicing, accounting): audited **34 reports** against the database and fixed sales-return pricing, journal-balance and trial-balance errors
- Lead cross-functional teams through the **full SDLC**, turning business requirements into sprint milestones as primary technical architect
- Standardized **CI/CD workflows** and peer review across the organization

- Freelance & Contract Work

Self-Employed • Remote

May 2025 — Mar 2026

 - Go developer (Jan — Mar 2026): engineered a high-concurrency **real-time tracking system** with Go and WebSocket, using goroutines for low-latency live updates in a microservice that integrates with existing platforms
 - Laravel developer, Azzain Company, Saudi Arabia (May — Sep 2025): refactored legacy PHP for a Trips Management Application and ran production deployments over SSH/FTP with **99.9% uptime** during critical updates
 - Ruby on Rails developer (Jun — Nov 2025): stabilized legacy Rails applications with security patches and database optimization, delivering client features under strict deadlines
- Back-End Laravel Developer

JoyBox Company • Damascus, Syria

Apr 2023 — Aug 2025

 - Architected a **Multi-Tenant Task Management System** using Laravel & Filament PHP with robust data isolation
 - Refactored core logic for the **"Shefaa" medical platform**: consultant-patient workflow and booking engine
 - Built a **Course Management System**: automated certificates, teacher/student scheduling, admin dashboards
 - Developed high-traffic **RESTful APIs** for School Management and Doctor Appointment portals, and **cut API response time by 30%** through query optimization and MySQL indexing
 - Integrated third-party services and webhooks to automate educational and payment workflows
- Software Tester & Laravel Developer

JoyBox Company • Damascus, Syria

Jan 2023 — Apr 2023

 - Executed test plans, test cases, and **regression testing** for enterprise web applications, including cross-browser and responsive checks

KEY PROJECTS

- JoyBox Company Website, "The Box" (*TypeScript, Three.js, GSAP*): framework-free, scroll-driven 3D site where the logo is a lit WebGL object that opens as the reader scrolls, with a GPU fluid simulation, a playable 3D mini-game, and a no-WebGL fallback
- Sheikh Anas Al-Dawamneh Platform & Nour Organization Website (*React 18, Express, SQLite*): two bilingual RTL/LTR content platforms with in-page live editing, role-based access, and a visitor submissions inbox, deployed on a Linux VPS
- Zahi ERP Static Checks (*Node.js*): analysis tool that catches permission, endpoint and type-drift bugs across a modular Laravel 10 / Angular 15 codebase, with a baseline so CI fails only on new errors
- AI Code Review Pipeline (*n8n*): captures Git pushes, sends the code to AI for a full logic review with SRS context, and emails the report
- Personal 3D Portfolio (*React Three Fiber*): animated starfield, glassmorphism UI, and an interactive 3D scene

EDUCATION

BSc in Mathematical Statistics

University of Damascus

2019 — 2023 • GPA: 3.5 / 4.0
